Genetically Modified Organisms (GMO) in Gelatin

Custom Collagen certifies that our gelatin products are natural products and not derived from genetically modified organisms.

In order for an organism to be classified as GMO, it must have a foreign gene inserted into its own genome. The only way to prove that anything is GMO is to check for the presence of this specific gene or for the proteins that this gene produces. This type of testing is highly specific involving the use of immunochemical protocols to detect the foreign gene or proteins.

To the best of our knowledge, there is no such thing as a general GMO test.

It should be pointed out that if a cow was to consume GMO feed, it would not become GMO itself and therefore the gelatin produced from its hide is also GMO free.
